# PROJECT OVERVIEW

FoodFiesta is a front-end prototype for a food delivery web application. It offers users the ability to search for food availability by location, explore food categories, browse top restaurant, view customer testimonials, subscribe for offers, and even track their food orders - all through a clean, responsive

# METHODOLOGY

1

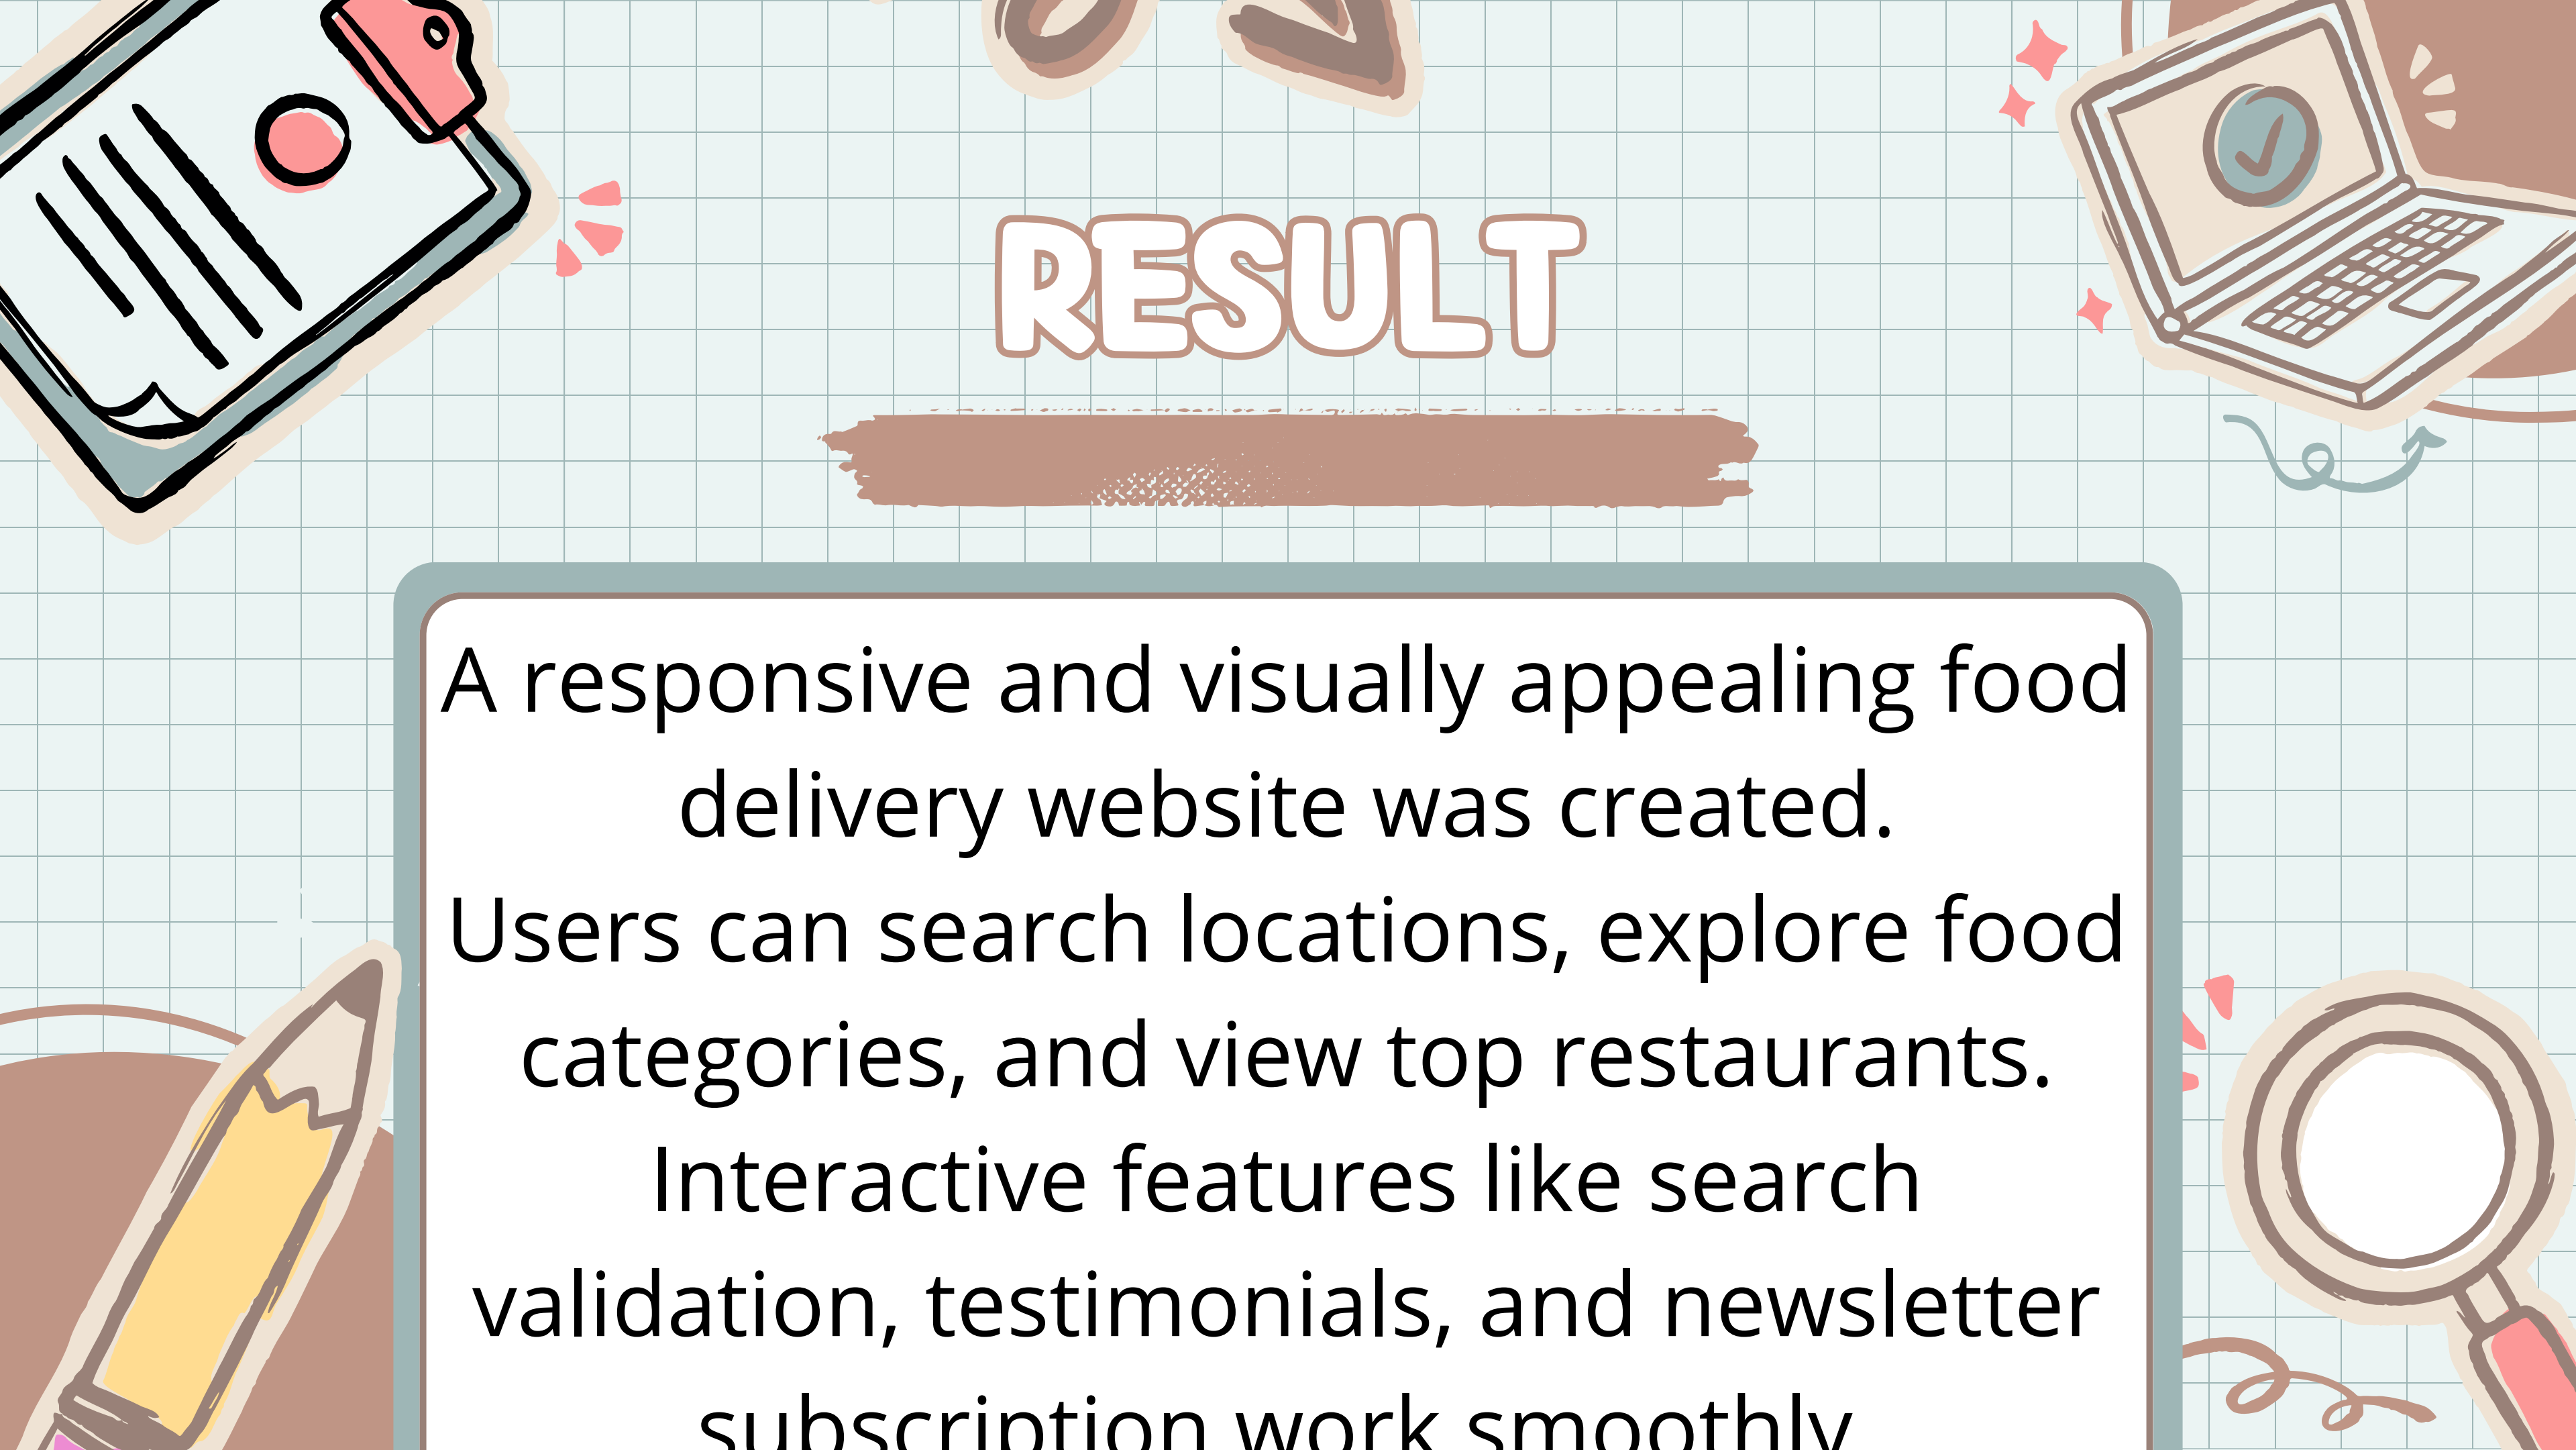

User-Centered Design Approach

2

Modular & Scalable Front-End Development

3

Progressive Enhancement & Future Integration  
Readiness

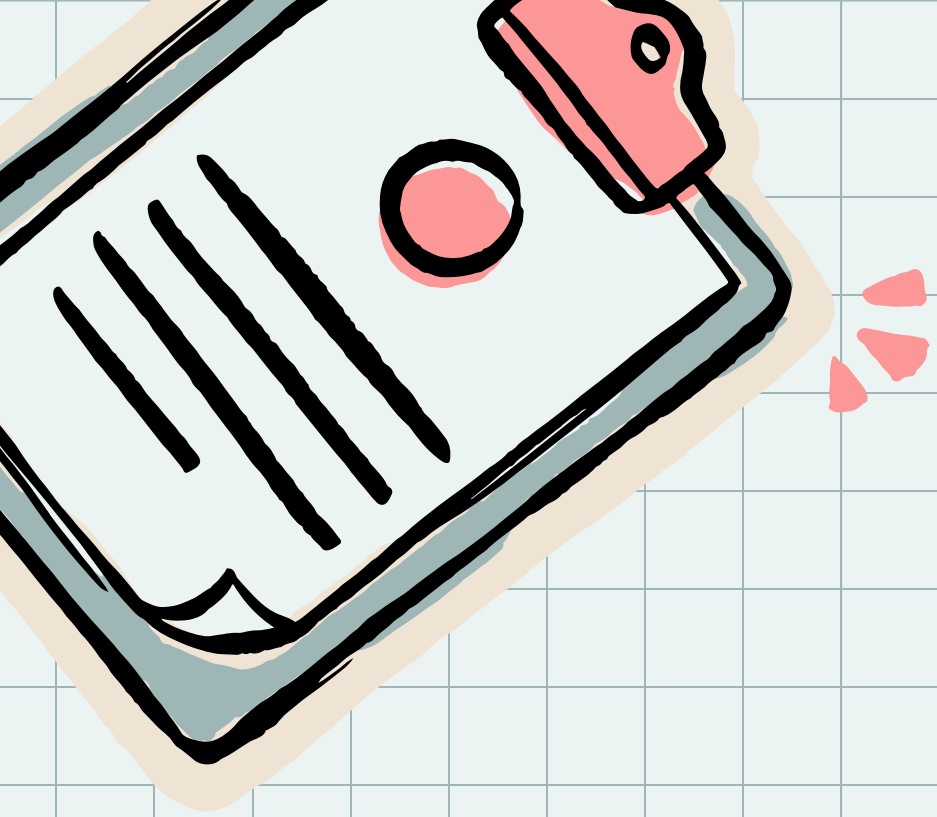

# RESULT

A responsive and visually appealing food delivery website was created.

Users can search locations, explore food categories, and view top restaurants.

Interactive features like search validation, testimonials, and newsletter subscription work smoothly
